Introduction

We must create a completed website using HTML, CSS, and JavaScript. According to the Coursework Specification, we must choose one main topic from the given topics. Our group chose to go with the Tourism. Hence our website name is 'WORLD UPON US'. The website was designed completely with a gallery section, a shop, and even with a quiz. The website is interactive, dynamic, and user-friendly. Text editors were used to build all the webpages, which were then styled using CSS and made dynamic with JavaScript. The website's theme is 'World Upon Us'.

The following is a summary about the names of the group members and each of their student roles which they have selected.

Student 1 – Janith Seneviratne

First student was given the Presentation Page, which is the loading page, and the Store Page using JavaScript, which is an online marketplace where students can buy field related things.

Student 2 – Rashmi Karunarathne

The second student was given the tasks of creating the website's home page and customer query form, as well as creating the navigation bar in order to link all the other student's pages

Student 3 – Kusal Dammine

The student 3 role was to make the details page of the Project Team and a quiz for the customers by using JavaScript.

Student 4 – Somaraj Nilothaman

The student 4 assisted in the creation of the Thumbnail Images page,

which includes descriptions. This student also used SVG to develop the website's sitemap page.

our contributions to the group meetings.

Group Coursework Meetings		
1	Date & Time:	06 March 2022 - online
	Objectives:	Discussion and Topic selection
	Attend:	All students attended
	Your Contribution:	Gave idea to select tourism
2	Date & Time:	12 March 2022 - online
	Objectives:	Role selection
	Attend:	All students attended
	Your Contribution:	I have selected student 2
3	Date & Time:	15 March 2022 - online
	Objectives:	Deciding how to do the several parts of the coursework
	Attend:	All students attended
	Your Contribution:	Created the logo and the external style sheet
4	Date & Time:	22 March 2022 - online
	Objectives:	Started creating the home page
	Attend:	All students attended
	Your Contribution:	Created the navigation bar and linked the others' pages
5	Date & Time:	24 March 2022 - online
	Objectives:	Discussed about the report
	Attend:	All students attended
	Your Contribution:	Given my idea about the technical writing
6	Date & Time:	25 March 2022 - online
	Objectives:	Final touches
	Attend:	All students attended
	Your Contribution:	Presented my part of the coursework and done extra stylings

Technical Discussion

All tasks allocated to me are completed.

Name & Logo

We have started by designing a logo and brand name for the website. The logo was designed as concept of me. After discussed we named our website "WORLD UPON US"; and we created a logo with a website name and a slightly opened circle which is drawn with a paint brush.

This was created using a logo designing and brand making website called "tailor brands".

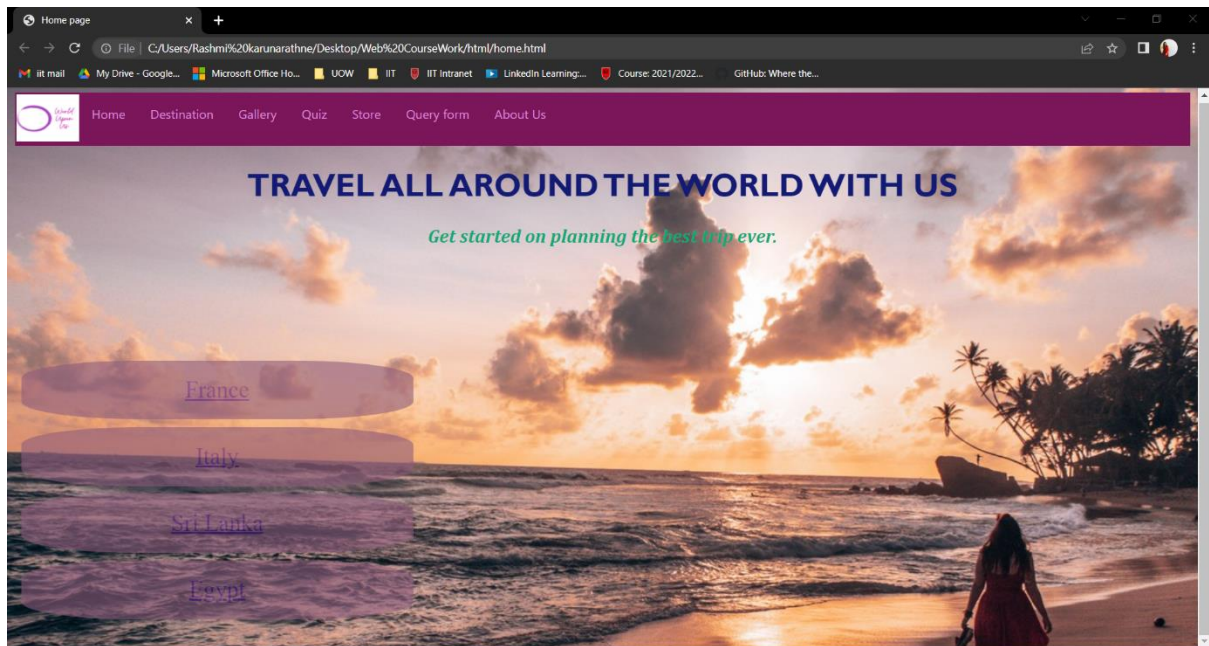

The tasks which were allocated to student 2,

1. Home page navigation bar and external css .
2. Query form.

Home page navigation bar

The home page includes a background image navigation bar and 4 flex boxes. The slogan of our web page is there under the navigation bar.

The following is the final outlook of our home page, html code and the css part of the navigation bar I did. I have used a horizontal navigation bar and made it more interactive using css such as hover effects.

```
<div class="navigation">
  <ul>

    <li></li>
    <li><a href="home.html">Home</a></li>
    <li><a href="svg.html">Destination</a></li>
    <li><a href="gallery.html">Gallery</a></li>
    <li><a href="quiz.html">Quiz</a></li>
    <li><a href="store.html">Store</a></li>
    <li><a href="queryform.html">Query form</a></li>
    <li><a href="about us.html">About Us</a></li>

  </ul>
</div>
```

```
ul {
  position: sticky;
  list-style-type: none;
  margin: 2px;
  padding: 2px;
  overflow: hidden;
```

```
background-color: rgb(124, 22, 90);

}

li {
  float: left;
}

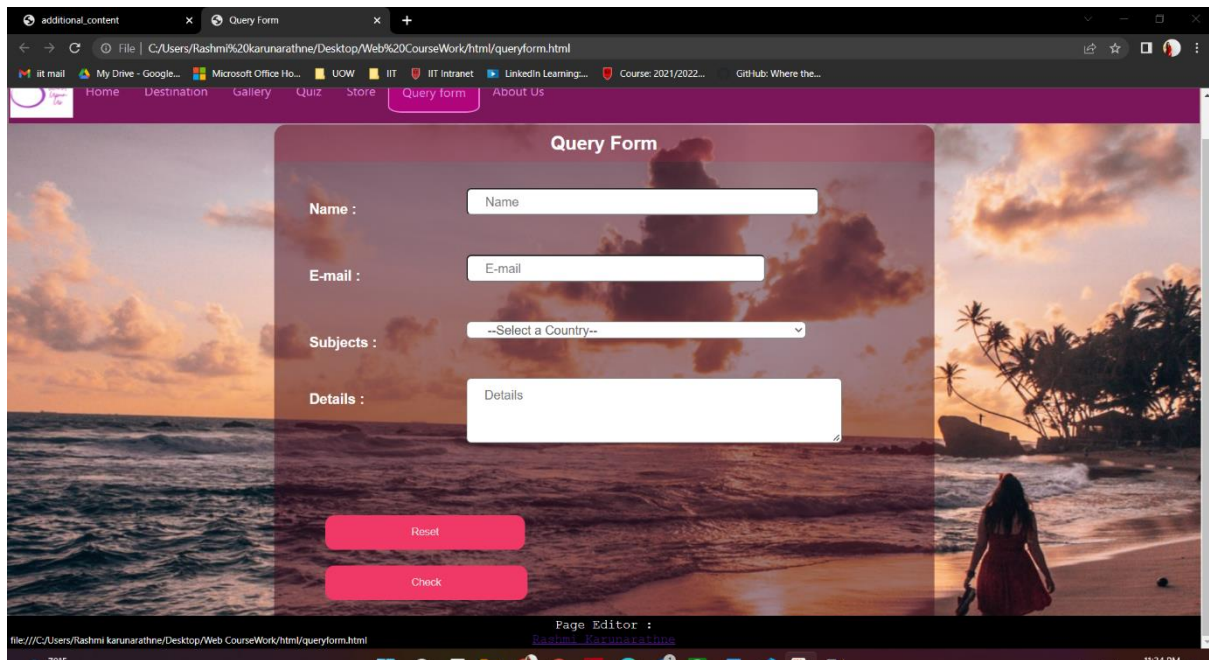

li a {
  display: block;
  color: rgb(218, 145, 218);
  text-align: center;
  padding: 14px 16px;
  text-decoration: none;
  font-size: 16;
  font-family: 'Segoe UI', Tahoma, Geneva, Verdana, sans-serif;
}

li a:hover {
  border: 2px solid rgb(250, 134, 231);
  border-radius: 15%;
  background-color: rgb(177, 5, 125);
}

.img{
  width: 80px;
  height: 60px;
}
```

Query form

Using that HTML and CSS output looks like this, this query form consist of an external style sheet and also an external java script.

For the form, I used labels, text boxes, selections and submit and reset buttons.

```
<div class="queryform" id="queryform"><h2>Query Form</h2></div>
  <form action="index.html" onsubmit=" return submitForm()" id="data_form"
name="form" class="main" >

    <div class="form-item">
      <label>Name :</label>
      <input type="text" name="name" id="name" class="name"
placeholder="Name">
    </div>

    <div class="form-item">
      <label>E-mail :</label>
      <input type="email" name="email" id="email" class="email"
placeholder="E-mail">
    </div>

    <div class="form-item">
      <label>Subjects :</label>
      <select class="subjects" name="subjects" id="subjects" >
        <option disabled="disabled" selected="selected" value="--
Choose a subject"-->--Select a Country--</option>
        <option value="subject 1">France</option>
        <option value="subject 2">Egypt</option>
        <option value="subject 3">Italy</option>
        <option value="subject 4">Sri Lanka</option><br>
      </select>
```

```

</div>

<div class="form-item">
  <label>Details :</label>
  <textarea type="text" name="details" id="details" class="details"
placeholder="Details"></textarea>
</div>

<div class="form-item">
  <button type="reset">Reset</button>
  <button type="submit">Check</button>
</div>
</form>

<div id="result" class="result" >
  <h4>Name - <span id="result_name"></span></h4>
  <h4>E-mail - <span id="result_email"></span></h4>
  <h4>Subjects - <span id="result_subjects"></span></h4>
  <h4>Details - <span id="result_details"></span></h4>
<div>
  <button type="button" onclick="toggleForm()">Edit</button>
  <form action = "mailto:rashmikiranarathne15@gmail.com" method="POST"
enctype="multipart/form.data">
    <input type="hidden" name="name" id="name1">
    <input type="hidden" name="email" id="email1">
    <input type="hidden" name="subjects" id="subject1">
    <input type="hidden" name="details" id="details1">
  <button type="submit"> Send</button>
</form>
</div>
</div>

```

Other than that, with the button actions, the input data is written into another page with an edit button and a send button and also when once clicked on the reset button all the input data disappears and it remains in the original format of the form. And also when the check Button clicked once, the input data write into a new page and in there , there are two buttons called edit and send , when edit button clicked once we are directing to the filled form again and we can edit the data we want and when once the send button is clicked once the input data is sent by an email. For that action we have used java script.

```
function submitForm() {
    let name = document.forms["data_form"]["name"].value;
    let email = document.forms["data_form"]["email"].value;
    let subjects = document.forms["data_form"]["subjects"].value;
    let details = document.forms["data_form"]["details"].value;

    if (name == "") {
        alert(" Name must be filled out.");
        return false;
    } else if (email == "") {
        alert("Email must be filled out.");
        return false;
    } else if (subjects == "--Choose a subject") {
        alert("Please choose a subject.");
        return false;
    } else if (details == "") {
        alert("Details must be filled out");
        return false;
    } else {
        // alert("Validated");
        document.getElementById("queryform").style.display = "block";
        document.getElementById("data_form").style.display = "none";
        document.getElementById("result").style.display = "block";

        document.getElementById("result_name").innerHTML = name;
        document.getElementById("result_email").innerHTML = email;
        document.getElementById("result_subjects").innerHTML =
subjects;
        document.getElementById("result_details").innerHTML = details;

        document.getElementById("name1").value = name;
        document.getElementById("email1").value = email;
        document.getElementById("subject1").value = subjects;
        document.getElementById("details1").value = details;
        return false;
    }
}

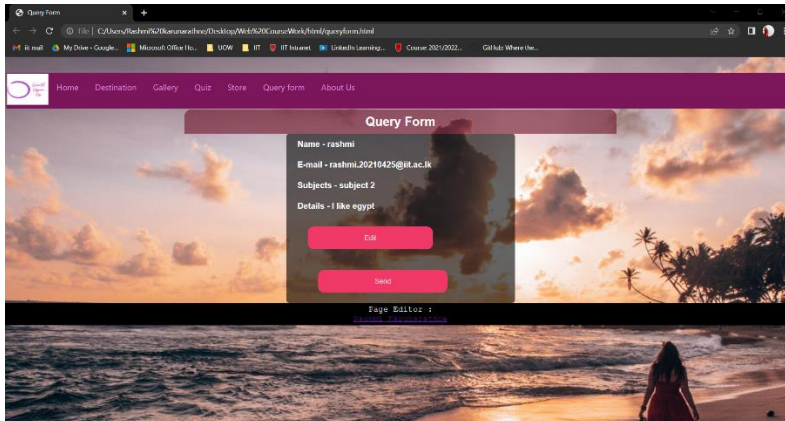

function toggleForm() {
    document.getElementById("data_form").style.display = "block";
    document.getElementById("result").style.display = "none";
}
```

```

}

function sendEmail(){
    document.getElementById("data_form").style.display = "block";
}

```

In the footer I have put a hyperlink to view the page editor. Once when the link is clicked the page is directing you to the page editor page.

```

<footer>
  <div>
    <p>Page Editor : <br>
    <a href="editor_page.html" class="ref">Rashmi Karunarathne</a></p>
  </div>
</footer>

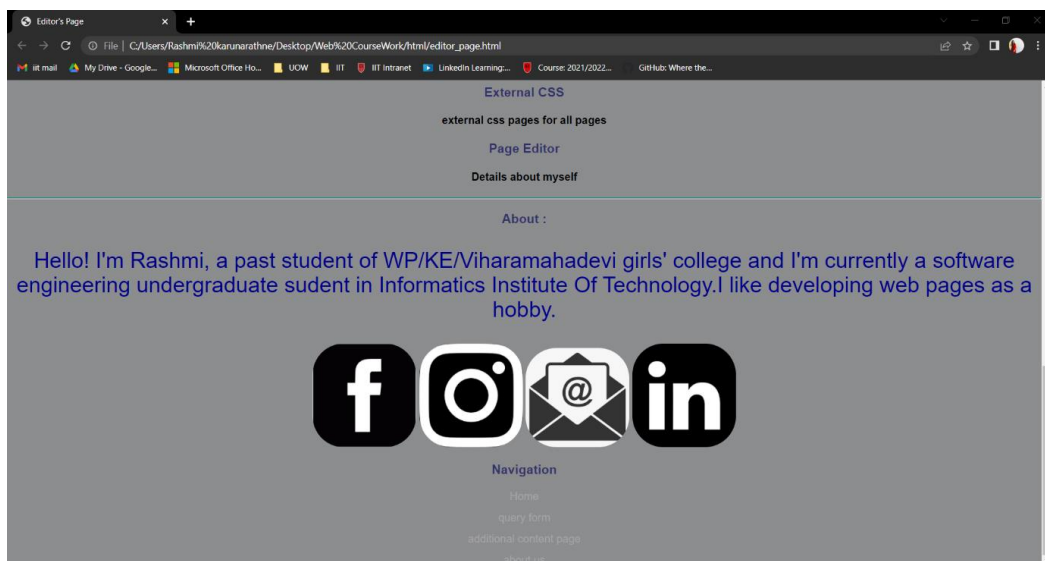

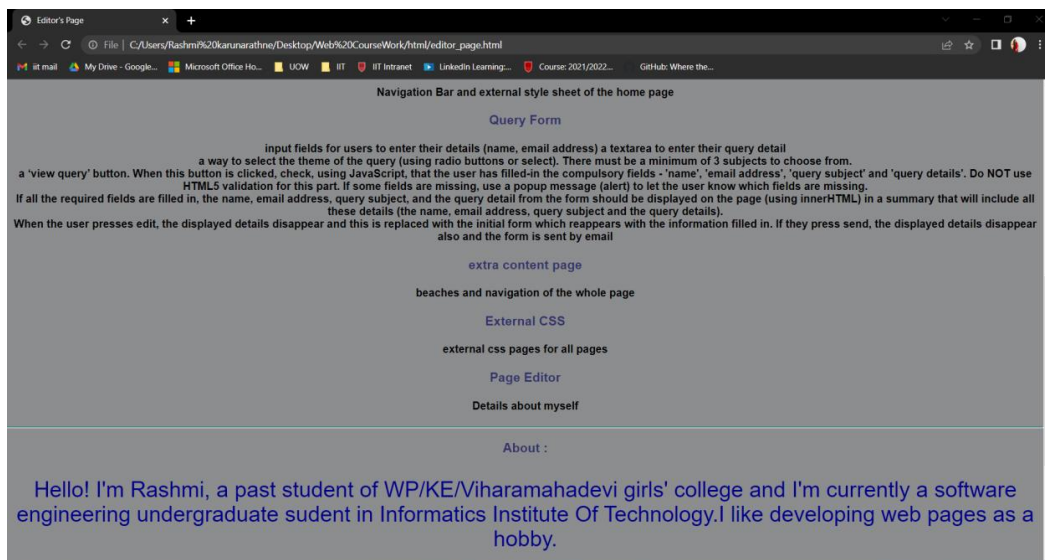

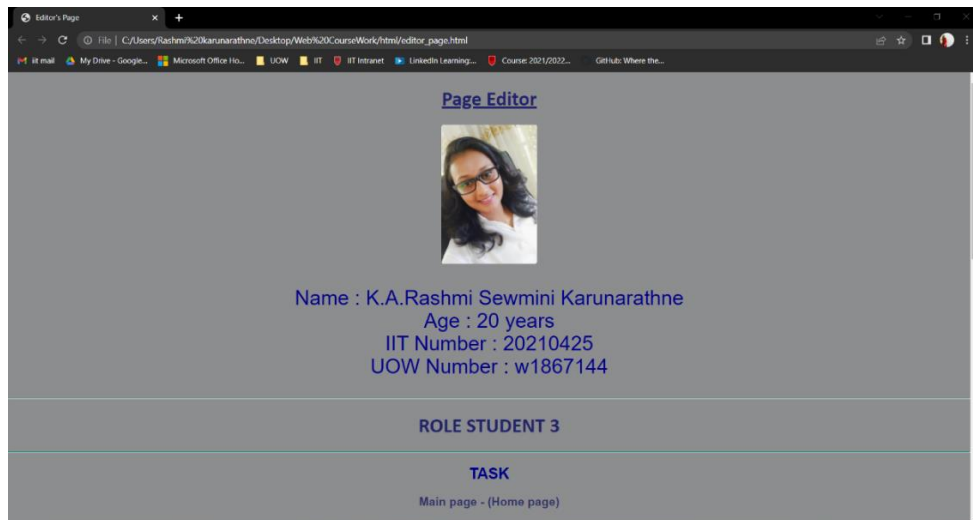

```

Page editor page

This page contains information about the page editor. This page uses an external style sheet, and it is created like a separated page.

March 29, 2022

Rashmi Karunarathne

Extra content page

All four of us in the group have made one additional content page. We have created a navigation bar specific for the additional content page which directs into separate parts in the same webpage.

```
<div class="navigation">
  <ul>
    <li></li>
    <li><a href="#france">France</a></li>
    <li><a href="#egypt">Egypt</a></li>
    <li><a href="#italy">Italy</a></li>
    <li><a href="#sri lanka">Sri Lanka</a></li>
  </ul>
</div>
```

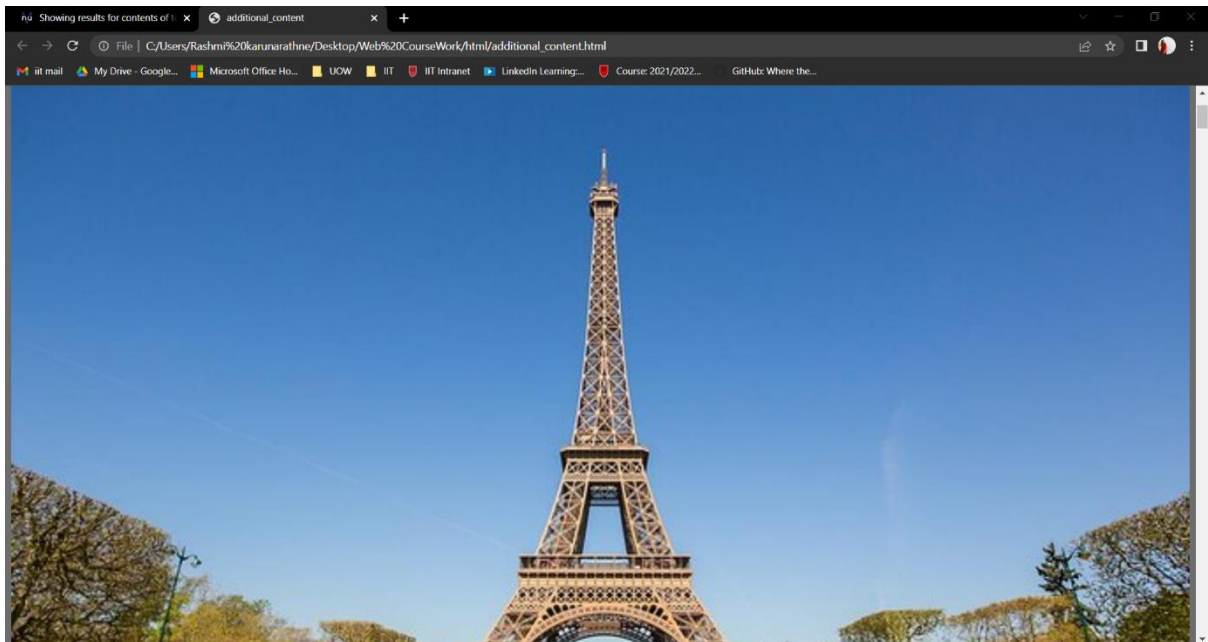

```
ul {
  position: sticky;
  list-style-type: none;
  margin: 2px;
  padding: 2px;
  overflow: hidden;
  background-color: rgb(114, 25, 92);
}

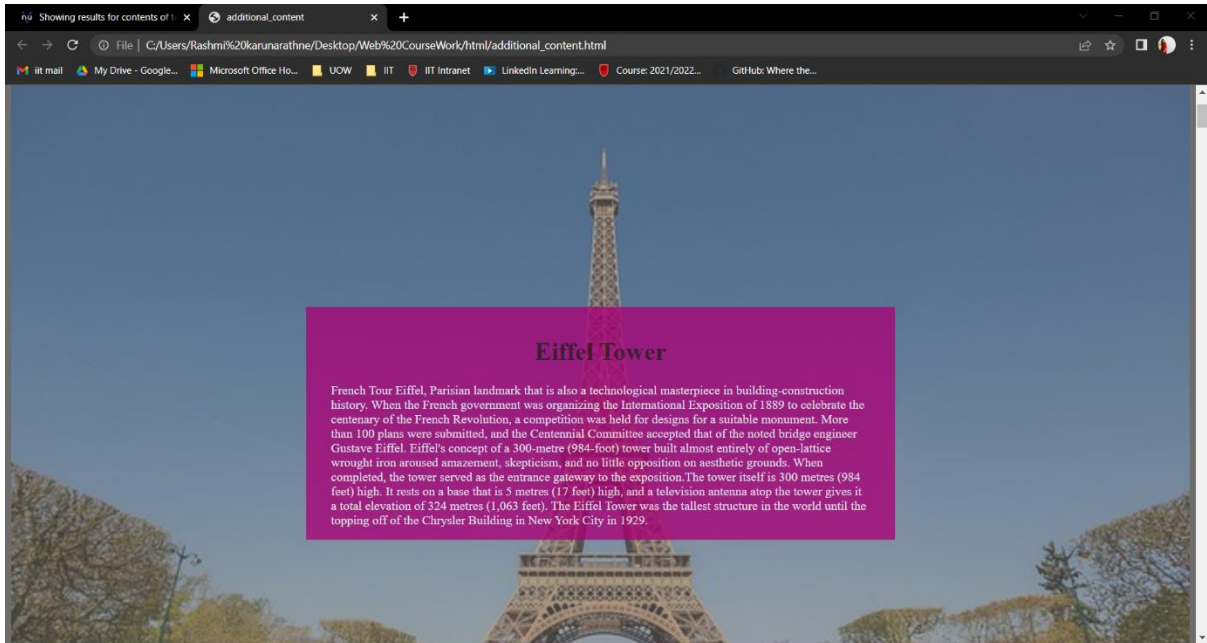

li {
  float: left;
}

li a {
  display: block;
  color: rgba(253, 252, 252, 0.658);
  text-align: center;
  padding: 14px 16px;
  text-decoration: none;
  font-size: 16;
  font-family: 'Segoe UI';
}
```

```
li a:hover {  
  border: 2px solid rgb(158, 158, 158);  
  border-radius: 15%;  
  background-color: rgb(196, 5, 110);  
}
```

I have used hover effect to make the page more interactive. The page consists of 4 main parts as France, Italy, Egypt and Sri Lanka. And each sub part contains 4 tourist attractive places with an image. When once the cursor moves on to an image, suddenly the image get blurred and a short description pops up in a box on the center of the image. For that I have used hover effect to give an additional interactivity for the page.

```
.container {  
  position: relative;  
  width: 100%;  
  
}  
  
.image {  
  opacity: 1;  
  display: block;  
  width: 100%;  
  height: auto;  
  transition: .5s ease;  
  backface-visibility: hidden;  
}  
  
.middle {  
  transition: .5s ease;  
  opacity: 0;  
  position: absolute;  
  top: 50%;  
  left: 50%;  
  transform: translate(-50%, -50%);  
  -ms-transform: translate(-50%, -50%);  
}  
  
.container:hover .image {  
  opacity: 0.3;  
}  
  
.container:hover .middle {
```

```
    opacity: 1;
  }

  .text1 {
    background-color: #aa0077;
    color: white;
    font-size: 16px;
    padding: 16px 32px;
  }

  .text2 {
    background-color: #b46e05;
    color: rgb(255, 253, 253);
    font-size: 16px;
    padding: 16px 32px;
  }

  .text3 {
    background-color: #3095d8;
    color: white;
    font-size: 16px;
    padding: 16px 32px;
  }

  .text4 {
    background-color: #01b368;
    color: rgb(255, 250, 250);
    font-size: 16px;
    padding: 16px 32px;
  }
}
```

Webpage Validation Statement

All the web pages validated without errors. The screenshots of the validated code and the page have mentioned there under the appendix C .

Janet

Janet is an open system that can be accessed from anywhere on the planet via the Internet. Before beginning the project, the company must first obtain Janet's approval, as well as bear responsibility for any existing legal restrictions and ensure that they are followed. I have not used any kind of illegal software to build this site and all the information I took from other websites such as stack overflow etc... are mentioned in references section.

<h2>TASK</h2>

<h3>Main page - (Home page)</h3>

<h4>Navigation Bar and external style sheet of the home page</h4>

<h3>Query Form</h3>

<h4>

input fields for users to enter their details (name, email address)

a textarea to enter their query detail

a way to select the theme of the query (using radio buttons or select).

There

must be a minimum of 3 subjects to choose from.

a 'view query' button. When this button is clicked, check, using JavaScript,

that the user has filled-in the compulsory fields - 'name', 'email address',

'query subject' and 'query details'. Do NOT use HTML5 validation for this part.

If some fields are missing, use a popup message (alert) to let the user know

which fields are missing.

If all the required fields are filled in, the name, email address, query subject,

and the query detail from the form should be displayed on the page (using

innerHTML) in a summary that will include all these details (the name, email

address, query subject and the query details).

When the user presses edit, the displayed details disappear and this is

replaced with the initial form which reappears with the information filled in. If

they press send, the displayed details disappear also and the form is sent by

email

        <div class="text1"><h1> Eiffel Tower</h1>
        French Tour Eiffel, Parisian landmark that is also a
        technological masterpiece in building-construction history. When
        the French government was organizing the International
        Exposition of 1889 to celebrate the centenary of the French Revolution, a
        competition
```

was held for designs for a suitable monument. More than 100 plans were submitted, and the Centennial Committee accepted that of the noted bridge

engineer Gustave Eiffel. Eiffel's concept of a 300-metre (984-foot) tower built almost entirely of open-lattice wrought iron aroused amazement,

skepticism,

and no little

opposition on aesthetic grounds. When completed, the tower served as the entrance gateway to the exposition. The tower itself is 300 metres (984 feet)

high. It rests on a base that is 5 metres (17 feet) high, and

a television antenna atop the tower gives it a total elevation of 324 metres (1,063 feet). The Eiffel Tower was the tallest

structure in the world until the topping off of the Chrysler Building in New York City in 1929. </div>

</div>

      <div class="text2"><h1>Abydos temple</h1>
        The Temple of Osiris in Abydos is one of Ancient Egypt's most
        fascinating artistic treasures. Its hypostyle halls, graced by papyrus-

```

headed columns, contain some of the finest relief-work in Egypt, with various scenes portraying the pharaoh and the gods of Ancient Egypt. The

temple of Seti I has an unusual

L-shaped ground plan and was built primarily of limestone, with the occasional use of sandstone in different areas throughout the structure. The inscribed labels also indicate that Egyptian writing had reached an advanced stage earlier than was generally recognized. In

addition, several

large-scale mud-brick enclosures located near the desert's edge were identified as funerary sites for the kings of the 1st

(c. 2925-c. 2775 BCE) and 2nd (c. 2775 - c. 2650 BCE) dynasties. A series of wooden boats covered by whitewashed mud-brick casings—probably

prototypes for the boats

buried in pits next to the pyramids of the Old Kingdom (c. 2575 - c. 2130 BCE)—were discovered alongside one of the enclosures. </div>

</div>

</div>

<div class="container">

<div class="middle">

<div class="text2"><h1> Abu simbel</h1>

Even in a country festooned with temples, Abu Simbel is something special. This is Ramses II's great temple,

adorned with colossal statuary standing guard outside, and with an interior sumptuously decorated with wall paintings. Justly famous its megalithic

proportions, Abu Simbel is also known for the incredible engineering feat carried out by UNESCO in the 1960s, which saw the

entire temple moved from its original setting to save it from disappearing under the rising water of the Aswan dam. </div>

</div>

</div>

<div class="container">

<div class="middle">

<div class="text2"><h1> Egyptian Museum </h1>

A treasure trove of the Pharaonic world, Cairo's Egyptian Museum is one of the world's great museum collections.

The faded pink mansion in downtown Cairo is home to a dazzling amount of exhibits. The museum's two highlight collections are the haul of golden treasures unearthed from Tutankhamen's tomb in the Valley of the Kings and the fascinating Royal Mummies exhibit room.

Every corner you turn here, though, is home to some wonderful piece of ancient art or statuary that would form a highlight of any other museum.</div>

</div>

</div>

<div class="container">

<div class="middle">

<div class="text2"><h1>Pyramids</h1>

Pyramids built during a time when Egypt was one of the richest and most powerful civilizations in the world, the pyramids—especially the Great Pyramids of Giza—are some of the most magnificent man-made structures in history.

Their massive scale reflects the unique role that the pharaoh, or king, played in ancient Egyptian society. The pyramids became the focus of a

cult of the dead king that was supposed to continue well after his death. No pyramids are more celebrated than the Great Pyramids of Giza, located on

a plateau on the west bank of the Nile River, on the outskirts of modern-day Cairo. The last of the great pyramid builders was Pepy II (2278-2184 B.C.),

the second king of the sixth dynasty, who came to power as a young boy and ruled for 94 years. Nowadays millions of people continue to visit

the pyramids

each year, drawn by their towering grandeur and the enduring allure of Egypt's rich and glorious past.</div>

<div class="container">
  
  <div class="middle">
    <div class="text4"><h1> Kandy</h1>
      Kandy is where you go to learn about and experience Sri
Lankan history. Located in central Sri Lanka, the city is the former capital
city
        of the Sri Lankan royal
        dynasty, the country's main capital before the colonial period.
The high point of what's called the "Kandian Era"
        was between the 15th and 18th centuries, when the area
remained independent while most of the coastal regions were colonized
by European powers.
        Be sure to visit the city's National Museum of Kandy, as it
illustrates the story of the region and its people via exhibits and artifacts.
        Nearby, the Temple of
        the Sacred Tooth Relic is a very holy Buddhist shrine, part of
the royal palace complex. Kandy Lake is at the heart of the city and offers
        a peaceful refuge from
        the heat. There are hiking paths that circle the lake, dotted
with temples and shrines.
        Kandy is surrounded by mountains, which are home to many
tea plantations. Some can be visited and offer tours and tea tastings.
        It's also surrounded by rainforests.
        The Udawatta Kele Sanctuary is a forest park located within
the city limits. The forest reserve has miles of hiking trails, as well as
        an excellent nature center
        with educational information.

<div class="text4"><h1>Udawalawe National Park</h1>
```

This large wildlife park is in the southern part of the country, about an hour's drive from the resort area of Hambantota. The terrain and environment vary, as the park is on the border of the country's wet and dry zones.

Visitors to the park can see elephants, as there's a large population of them, along with crocodiles, water buffalo, and more. In fact, it's

one of the best places in the world to see elephants in the wild outside of Africa.

There are leopards there, too, but they can be very hard to track or spot. There are also monkeys and a large assortment of deer and small

mammals. It's also an excellent place for bird-watching.

There are some small accommodations and guesthouses across from and even inside Udawalawe. You can also visit as a day trip, the best times

to visit are very early in the morning or very late in the afternoon.

5.     Home page+
```

The screenshot displays a web browser window with two tabs. The first tab, titled 'Query Form', shows a web page with a purple header containing navigation links: Home, Destination, Gallery, Quiz, Store, Query form, and About Us. The main content area features a 'Query Form' with the following fields: 'Name' (text input), 'E-mail' (text input), 'Subjects' (dropdown menu with '--Select a Country--'), and 'Details' (text area). A pink 'Reset' button is located at the bottom of the form. The background of the page is a scenic image of a beach at sunset. The second tab, titled 'Content', shows the W3C Validator page for the file 'nu'. The page title is 'Showing results for contents of text-input area'. The 'Checker Input' section shows the HTML source code of the page, including the DOCTYPE, head, and body tags. The 'Check' button is visible. Below the checker input, a message states: 'Document checking completed. No errors or warnings to show.' The 'Source' section lists the HTML code for the first five lines of the document.

Check

Use the Message Filtering button below to hide/show particular messages, and to see total counts of errors and warnings.

Message Filtering

Document checking completed. No errors or warnings to show.

The screenshot shows a web browser window with the URL `C:/Users/Rashmi%20Karunarathne/Desktop/Web%20CourseWork/html/additional_content.html`. The page has a purple header with navigation links for France, Egypt, Italy, and Sri Lanka. The main content area features a large image of the Eiffel Tower. A purple box with white text provides information about the Eiffel Tower, including its height and historical context.

Below the browser window, the Nu Html Checker interface is visible. It shows the HTML code for the page, which includes a DOCTYPE declaration, a title, a link to a stylesheet, and a navigation menu. The checker reports that the document checking is completed with no errors or warnings.

```
<!DOCTYPE html>
<html lang="en">

      </ul>
    </div>
  </body>
</html>
```

Document checking completed. No errors or warnings to show.

Appendix D: Individual Statement

Student Name:	K.A.Rashmi Sewmini Karunarathne	Student Id:	W1867144 20210425
State what tasks you carried out in the project.			
Home page and it's external style sheet Main page navigation Query form which displays the entered details when check button clicked once and email the input data when send button clicks Additional content page Page Editor page			
State what you enjoyed and did not enjoy about teamwork.			
We have discussed every problem and fix it all. we can have a good approach because we have discussed it like a team. What I did not like is we couldn't meet each other physically. sometimes we had some issues with connection and data problems and also with these power cuts. we can do this better if we can do it physically.			
State what you learnt about teamwork.			
Take a decision as a group and how to obey and give respect to others. To teach what I know, and I learned what I don't know.			
State what skills you gained/learnt from undertaking the project.			
The main thing is to do work with a specific plan. how to manage time and do work according to specification.			
State any strengths about yourself that emerged whilst undertaking the project.			
I didn't like web programming at first but now, I think that's quite the opposite.			
State any weaknesses about yourself that emerged whilst undertaking the project.			
I waited till my lecturer covers most parts of web module to start my course work. Now I see that was a mistake and should've started in the beginning.			
State how you would do things better if you were to undertake the project again.			
I would add some more javascripts to this pages to make it much more interactive. I will add more content to gallery and destinations. I would like to do it at someone's place rather than doing it online.			
Additional general or project specific comments:
